PERFORMANCE

and SERVICE

in FIREPROOFING

THE BOSS

(Better Overall Spraying System)

the **BOSS + POWER-PACK 2** is used for small jobs and patch work. Its respectable production of 0-15 lbs per min. over a distance of 100-120 ft., on only 115 Volt makes it also an ideal machine for respray work after asbestos abatement. Coupled with any 230 Volt Power-Pack (5HP, 7½HP, 10HP) doubles the feed capacity and reaches distances in relation to its HP-level.

the **BOSS + POWER-PACK 5** has a spraying capacity of 0-25 + lbs. per min. over a distance of 300 ft., which is sufficient for many fireproofing jobs. As is standard with all **BOSS** machines it also has a variable remote volume control.

the **BOSS + POWER-PACK 7** is the most popular of the **BOSS** machines. Its ability to spray 0-30 + lbs., per min., over a distance of 500 ft., or more meets most job demands. Contractors value its excellent performance under high job stress. As with all **BOSS** machines its hard-chrome airlock will last beyond general expectations.

the **BOSS + POWER-PACK 10** is a typical high-rise machine. it is mostly used where 3-phase power is easily accessible. It can be offered with variable or fixed feed volume control and carries as all **BOSS** machines an eighteen-month warranty.
